

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1. (currently amended): A fluid dispenser comprising:

two distinct dispenser units (1), each comprising a fluid reservoir (20) defining an opening (23), a dispenser member (3) for taking and dispensing the fluid from the reservoir, and a fastener member (4) for fastening the dispenser member (3) on the opening (23) of the reservoir (20); and

a common outer shell (6) in which at least the two reservoirs (20) are housed, the shell (6) including receiver means (62) for receiving and holding the two dispenser units (1) inside the shell, and

~~said dispenser being characterized in that wherein~~ the receiver means (62) form two snap-fastener housings (620), ~~the each fastener member holding means~~ forming a peripheral radial flange (43) which extends outwards, and which ~~snap-fastens is for snap-fastening~~ in a respective housing so as to hold the respective dispenser unit in the shell.

Claims 2 and 3 (canceled).

4. (currently amended): ~~A dispenser according to claim 1,~~ A fluid dispenser comprising:
two distinct dispenser units (1), each comprising a fluid reservoir (20) defining an opening (23), a dispenser member (3) for taking and dispensing the fluid from the reservoir, and

a fastener member (4) for fastening the dispenser member (3) on the opening (23) of the reservoir (20); and

a common outer shell (6) in which at least the two reservoirs (20) are housed, the shell (6) including receiver means (62) for receiving and holding the two dispenser units (1) inside the shell, and

wherein the receiver means (62) form two snap-fastener housings (620), each fastener member forming a peripheral radial flange (43) which extends outwards and which is snap-fastens in a respective housing; and

wherein the dispenser further comprises ~~further comprising~~ blocking means (7) for blocking the dispenser units (1) in the receiver means (62).

5. (previously presented): A dispenser according to claim 4, in which the blocking means comprise a cup (7) fastened on the shell (6), and coming into blocked engagement with the dispenser units (1).

6. (previously presented): A dispenser according to claim 4, further comprising a dispenser head (5) for actuating the two units (1) simultaneously, the cup (7) forming a sleeve (73) having the dispenser head (5) slidably engaged on its inside or its outside, the sleeve (73) including retention means (731) suitable for preventing the head from being removed from the sleeve.

7. (previously presented): A dispenser according to claim 6, in which the dispenser head (5) is adapted to be mounted on actuator rods (34) of the respective units, the retention means

(731) enabling the head (5) to be prepositioned on the actuator rods (34), the final mounting of the head on the rods taking place while the dispenser is being actuated for the first time.

8. (currently amended): A dispenser according to claim 1-9, in which the shell (6) is provided with a bottom wall (8), and the reservoirs (20) do not come into bearing contact against the bottom wall.

9. (currently amended): ~~A dispenser according to claim 1;~~ A fluid dispenser comprising:
two distinct dispenser units (1), each comprising a fluid reservoir (20) defining an
opening (23), a dispenser member (3) for taking and dispensing the fluid from the reservoir, and
a fastener member (4) for fastening the dispenser member (3) on the opening (23) of the
reservoir (20); and
a common outer shell (6) in which at least the two reservoirs (20) are housed, the shell (6)
including receiver means (62) for receiving and holding the two dispenser units (1) inside the
shell, and
wherein the receiver means (62) form two snap-fastener housings (620), each fastener
member forming a peripheral radial flange (43) which extends outwards and which is snap-
fastens in a respective housing; and

in which the receiver means are formed integrally as a single piece with the shell.

10. (currently amended): ~~A dispenser according to claim 1;~~ A fluid dispenser
comprising:
two distinct dispenser units (1), each comprising a fluid reservoir (20) defining an

opening (23), a dispenser member (3) for taking and dispensing the fluid from the reservoir, and a fastener member (4) for fastening the dispenser member (3) on the opening (23) of the reservoir (20); and

a common outer shell (6) in which at least the two reservoirs (20) are housed, the shell (6) including receiver means (62) for receiving and holding the two dispenser units (1) inside the shell, and

wherein the receiver means (62) form two snap-fastener housings (620), each fastener member forming a peripheral radial flange (43) which extends outwards and which is snap-fastens in a respective housing; and

in which the dispenser units are engaged in the receiver means via the a top of the receiver means, such that the reservoirs penetrate firstly into the shell via the receiver means.

11. (currently amended): ~~A dispenser according to claim 10~~, A fluid dispenser comprising:

two distinct dispenser units (1), each comprising a fluid reservoir (20) defining an opening (23), a dispenser member (3) for taking and dispensing the fluid from the reservoir, and a fastener member (4) for fastening the dispenser member (3) on the opening (23) of the reservoir (20); and

a common outer shell (6) in which at least the two reservoirs (20) are housed, the shell (6) including receiver means (62) for receiving and holding the two dispenser units (1) inside the shell, and

wherein the receiver means (62) form two snap-fastener housings (620), each fastener member forming a peripheral radial flange (43) which extends outwards and which is snap-

fastens in a respective housing; and

in which the receiver means (62) comprise two housings (620), each comprising snap-fastener profiles (621) and bearing surfaces (622), ~~the each fastener member holding means~~ including a flange (43) defining a top face engaged with the snap-fastener profiles, and a bottom face engaged with the bearing surfaces.

12. (previously presented): A dispenser according to claim 11, further comprising a dispenser head that is displaceable by bearing axially in such a manner as to press the bottom face of the flange against the bearing surfaces.

13. (new): A fluid dispenser comprising:

two distinct dispenser units, each dispenser unit comprising a fluid reservoir defining an opening, a dispenser member that dispenses fluid from the reservoir, and a fastener member that comprises a peripheral radial flange that extends outwards, wherein the fastener member secures the dispenser member on the opening of the reservoir; and

a common outer shell in which at least the two reservoirs are housed, the shell comprising a snap-fastener portion that holds the two dispenser units inside the shell through a snap-fastened coupling with the radial flange;

wherein each fastener member co-operates with the snap-fastener portion of the shell to hold the respective unit separately inside the shell.
